Chapman and Hall, United Kingdom, 1992. Hardback. Book Condition: New. 1992 ed.. 234 x 160 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.CIM (computer integrated manufacturing) is an acronym that has become fairly well known in recent years in manufacturing and related engineering circles. The purpose of the CIM Project at IIASA is to close the widening gap between the pace of technological, economic, and social events, on the one hand, and the progress of understanding those events, on the other. The IIASA study has attempted, first, to define the existing world situation with regard to the underlying technologies of CIM, and the degrees to which technologies such as NC/CNC machine tools, robotics, and CAD/CAM are currently being used in metal products manufacturing. The methodology adopted in the study is eclectic. It is multiperspective and multidisciplinary, as well as multinational. It incorporates elements of both bottom-up and top-down approaches. Finally, it incorporates both historical analysis and model forecasts of the future, together with scenarios analyses. This fourth volume in the series focuses on the effects of CIM on society and the economy in both quantitative and qualitative terms.
